Website: mwdowns.me

Currently enrolled at DigitalCrafts in a four month accelerated learning course focusing on full-stack web development. Languages and skills include HTML, CSS, Javascript, Python, JQuery, AngularJS, Node.js, Agile and Test Driven Development.

Projects

	Description
Simple Memory	Simple Memory game built using HTML, CSS, Javascript and Angular. The player can choose between three sizes of board with a random selection of cards. This isn't the most groundbreaking of projects but I'm proud of some of the code efficiency (though it can be improved more). A couple of the bigger problems faced were refactoring the original functions for making a board and making sure that there were no repeats of the card-pairs on a single board. URL: mwdowns-memory.surge.sh GitHub: github.com/mwdowns/AngularMemory
GetCohort	GetCohort was a group project using HTML, CSS, Python, Flask, PostgreSQL and Agile methodologies. The app was envisioned as a site where Code Schools could showcase their students for prospective employers, students could catalogue their projects and skill development at a Code School, and employers could find possible new hires. While not the most beautiful site, it's underlying framework and database structure is robust and extremely scalable. Our biggest problems were with implementing image storage for avatars, project screenshots, etc. Simplest solution for now was to store the images in a separate file, but in the future we'd like to store them in the database.
